Bactron Sales Notes:

(use the Arrow Keys to scroll instead of the mouse wheel)

		<p>General Notes -</p>	<p>Purchase of the Bactron systems (and if applicable, the Essential Accessories Kit) will net you a chamber, vacuum pump, foot pedal controls, chamber lighting, sleeves, condensation controller, O2 scrubbing catalysts, petri dish racks, and an AMG tank regulator. You can optionally add in other accessories, and the most popular are the carbon scrubber fan, the consumables start-up kit, and the N2 tank regulator. More notes on those below. You will need access to a laboratory oven to bake the O2 scrubbing catalysts, such as the SGO1 or SMO1 ovens from Shel Lab. You will also need to provide a source of mixed anaerobic gas (AMG) to run the chamber, and an example of this is AirGas part number X03N190C3001054</p>				
		<p>917-995-0008 and 917-995-0009</p>	<p>BACTRONEZ ESSENTIALS ACCESSORY KIT - This kit contains several accessories that are not included with the BactronEZ and need to be purchased seperately. This includes Exterior LED Lighting fixture, a CGA-350 gas regulator for AMG tanks, a secondary Ergonomic Grip Catalyst Holder that can be used while the primary catalyst is being purified, and a batch of Petri Plate Racks that hold up to 22 petri dishes each for rapid loading and unloading of the heated incubator. All of these are included as standard with the Bactron300, 600, or 900 systems.</p>				
		<p>8310503</p>	<p>We offer technical commissioning of your Bactron or Bactrox chamber to ease the process of bringing the system online for the first time and to introduce your staff to some useful training material for daily operation of your chamber. If you have experience with anaerobic culture or have use other brands of anaerobic chamber, this service would serve to make you acquainted with your new chamber and help to improve your daily operating experience.</p> <p>Bactron Technical Commissioning includes sending a Sheldon Manufacturing-trained technician to your facility to complete the commissioning of your chamber, perform systems tests, and provide user training to your staff. This service does not include traditional "installation" such as heavy lifting or placement of the chamber in the desired location, but it does include connecting your gas and electrical lines to the Bactron and rendering the system anaerobic for use. You will need to have your AMG tanks and other</p>				
		<p>8310504</p>	<p>We offer an advanced commissioning of your Bactron or Bactrox chamber to ease the process of bringing the system online for the first time, introduce your staff to some useful training material for daily operation of your chamber, and to discuss the theory and long-term mechanics to using anaerobic chambers in the context of anaerobic culture. If you do not have significant experience with the use of anaerobic chambers, this service would serve to help transition you into the use of anaerobic chambers and help your laboratory envision productive and efficient workflows. Bactron Advanced Training includes sending a Sheldon Manufacturing anaerobic microbiologist to your facility to complete the commissioning of your chamber, perform systems tests, and provide enhanced user training to your staff. This service does not include traditional "installation" such as heavy lifting or placement of the chamber in the desired location, but it does include connecting your gas and electrical lines to the Bactron and</p>				

		9740567	<p>We offer a Nitrogen Tank Regulator equipped with the fittings and tubing needed to connect it to your Bactron anaerobic chamber. This will help you reduce long-term operating costs by allowing the use of N2 gas to purge the airlock chamber instead of relying entirely upon the premixed AMG supply that maintains the anaerobic conditions in the chamber to perform a simple task such as purging the transfer airlock. Has CGA-580 threading.</p>			
		9490578 and 9490581	<p>The Sheldon Manufacturing Carbon Scrubber Fan will help to remove the VOCs and VSCs evolved from our anaerobic cultures. This helps to reduce the odor emitting from your samples and prolongs the effectivity of the palladium catalysts that are responsible for maintaining the anaerobic conditions. The Carbon Scrubber Fan utilized specially-treated activated carbon that is superior to common activated carbon at remediating volatile reduced sulfur compounds. The fan comes with a three-month supply of activated carbon which is also available by the kilogram on its own or as part of the Bactron Consumables Start-Up kits.</p> <p>This fan is meant to draw power directly from the Bactron chamber's internal electrical outlets. Please be sure to order the specify the correct voltage of carbon fan when placing your order.</p>			
		9490511 and 9490512	<p>The Consumables Start-Up Kit comes with many useful consumable items for your anaerobic chamber. We recommend having the contents of these kits on hand for use in time of need, and they include:</p> <ul style="list-style-type: none"> • A spare airlock gasket • A gallon of chamber cleaning solution • Flange care solutions • Specially-treated activated carbon for VOC and VSC removal • Extra cuff supplies • Extra anaerobic indicator strips <p>We offer two different start-up kits depending on the size of your anaerobic chamber, so please check the product descriptions before ordering to make sure your consumables match your chamber. Supplier number 9490512 works for the BactronEZ and 9490511 works for the larger-sized Bactron chambers.</p>			
		9951418 and 9951419	<p>This Kit contains the Bactron300/600/900 Consumables Start Up Kit (9490511), the N2 Regulator Assembly (9740567), and the Carbon Scrubber Fan (2 voltages available) all wrapped-into a single line item. This pack is recommended to maximize your Bactron user experience to reduce long-term operating costs, remediate the foul emissions of anaerobic cultures, and provide useful consumables to have on-hand in the event they are needed.</p> <p>Although these accessories are entirely optional, they are highly recommended from a technical and from an economic standpoint. Please note this accessory pack is only available for the Bactron300, Bactron600, and Bactron900 chambers and is available in two different voltages. Please be sure to verify the compatibility of the Deluxe Bactron Accessory it with the Bactron chamber that you plan to order.</p>			

		BACSTAND-SM22, MD22, and LG22	This Caster Stand features rugged construction and locking casters/wheels to safely store, operate, and transport your controlled environment chamber. Designed for operators using adjustable-height laboratory chairs or stools, this stand can help to reduce the fatigue that can come from standing in front of a glovebox for extended periods of time and also allows you to install your chamber where sufficient benchtop space may not be available. The Medium and Large stands have storage cabinets. Ordering a chamber and a stand at the same time will allow us to ship the chamber on the stand which eases the unloading and installation process.			
		9902223	The FibroxT trace O2 analyzer can be used to precisely track the anaerobic conditions of your chamber and allows for data-upload to a PC. This is a hand-held device that can also be paced in the chamber for longer periods of time as battery-life allows. You can add a temperature probe to it as well to increase your datalogging capacity. This device is far more sensitive, responsive, and accurate than competitor brands' "house-made" stand-alone devices.			
		4600501	This hydrogen leak detector is useful for diagnosing leaks in the field. It may not be needed for most customers but it is helpful for facilities that have multiple Bactrons, service their own equipment, or have patient- or experiment-critical samples where the staff on-site are willing to perform troubleshooting instead of simply waiting for service to arrive.
